INDUSTRY

Technology

Eagleview Technologies interviewed 4 reputable contractors to complete their 3.5 floor tenant improvement, and selected Avara Construction. Eagleview took over 3 and a half floors of dark and confined space which left Avara with significant demolition scope. The project consisted of complete demolition of the space to a vanilla shell, and rebuild of 3-1/2 floors in Skyline Tower with inter-connecting stair systems throughout, and a stair infill on the 5th floor. Each floor was a full trade scope from mechanical redistribution, electrical upgrades, converting the space to OTS (open to structure), all new GWB walls, glazing, and new finishes.
